

Context

The CEATY project (Clean Energy Ambassador Training for Youngsters) is funded by the Erasmus+ programme of the European Commission. The project is an online climate and energy training initiative, designed to achieve the EU target of net zero emissions by 2050 through education, public awareness, and cooperation.

The project aims to fight against global warming by providing school children, 12 to 16 years old, with knowledge about energy consumption, energy savings, renewable energy sources, through developing their ecological consciousness, and helping them become Clean Energy Ambassadors. This aim is in tune with the new 2030 Agenda for Sustainable Development, which reflects the urgency to embed the principles of Education for Sustainable Development into all levels of education.

Funded by
the European Union

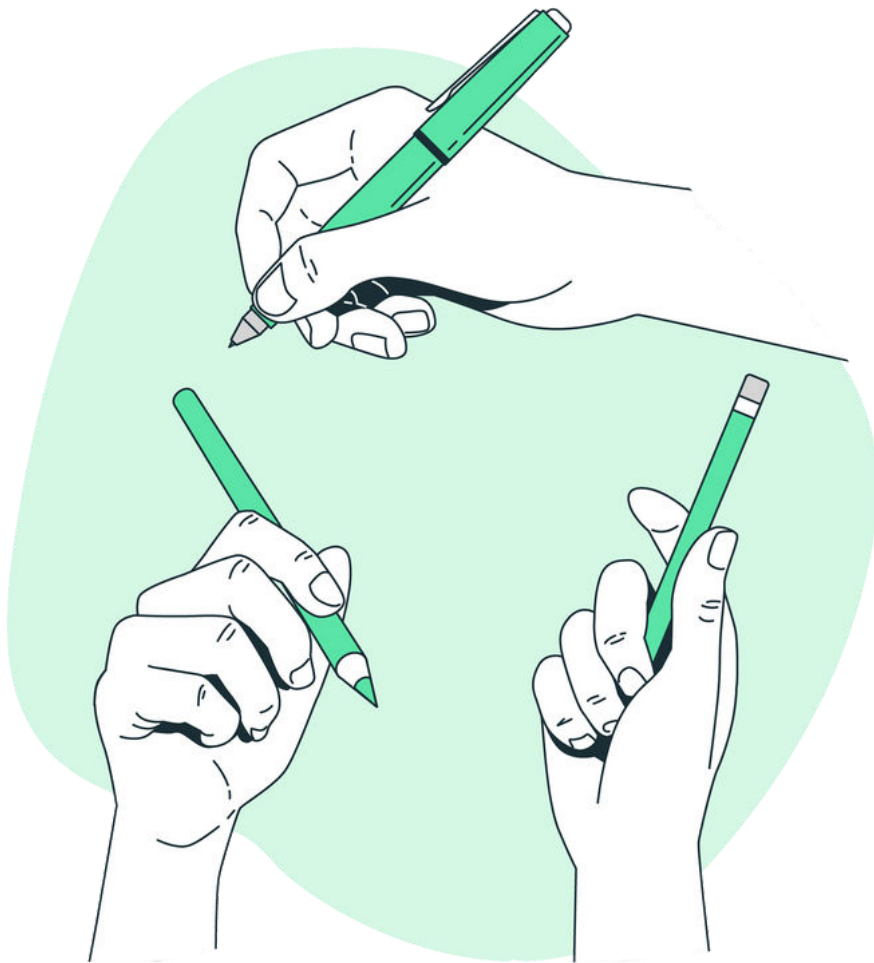

Objectives

To achieve these ambitious objectives, CEATY consortium will develop online teaching tools, facilitating change in education by empowering school learners to contribute to the protection of environment and to combat climate change.

Through empowering students to act as Clean Energy Ambassadors for their families, the project will improve the citizens' awareness on the negative implications of climate change and irresponsible energy consumption, thus inspiring new personal values and attitudes so as to support the attainment of the EU common climate and energy goals to reduce emissions to net zero by 2050.

The attractive and entertaining nature of the activities within the CEATY training programme will motivate students to share them with their siblings and peers. The promotional quiz-like sections will encourage students to present their new competences to their parents and other adult relatives, thus empowering the children to act as Clean Energy Ambassadors within their families and circles of friends, and guaranteeing the impact of the project to a wider, non-school related audience. Upon completion of the training students will have acquired sound understanding about EU common climate and energy goals, and will have learned about their own role and responsibilities as European citizens.

Main Products

The Consortium will build the training program through 3 main activities:

1. Curriculum Design and Development.
Design of a Curriculum on green energy sources, energy efficiency, and climate change adjusted to the needs of the 5 partner countries schools involved in the project.
2. Development of a Toolkit/clean energy game for training of school children as Clean Energy Ambassadors.
3. Development of an E-learning platform Online Clean Energy Ambassadors training with educational dissemination tools and pilot testing to check and verify its usability and applicability.

The E-learning platform, the Toolkit for Clean Energy Ambassadors and online training will be open and free for everyone to use.
